About Stern Weber: Cefla History

Cefla was founded in Imola, Italy in 1932. From its beginnings with just a few people, the company now has 1,800 employees.

Stern Weber, one of the trademark brands of Cefla, was founded in 1958 and produced the first dental unit in the world with instruments at the end of an articulated, balanced arm.

Since then, Stern Weber has always provided equipment with innovative solutions, designed to take into account each dentist's specific needs.

About Ivoclar

Ivoclar is a premier supplier of high quality dental products, equipment, consumables, digital technologies and education. The history of our family business dates back to 1923. Today, we are one of the world's leading-edge dental companies.

Ivoclar Australia offers a wide range of equipment products and services including dental chairs, x-ray equipment and other chairside and laboratory equipment.

We are differentiated by a high level of added value services, such as in-house and contracted, factory trained technical servicing, repair and installation.

Our integrated solutions are helping to improve the state of oral health throughout the world. Like our customers we never stand still – we share one mission: Making People Smile.

ALWAYS CONNECTED

All new generation Stern Weber dental chairs are equipped with the Easy Check licence option

What is Easy Check

When connected to the web through Easy Check, a dental unit can rely on real time remote diagnostics and updates; reduced service calls, improved efficiency and easy maintenance.

"I have been installing Stern Weber Chairs for 15 years, and I have a great deal of respect for their quality, features and the brand. They are simple to install and very adaptive. The interface is user friendly with a big touch screen. The Easy check, remote diagnosis helps us [service technicians] to provide quick solutions, thus saving time and money for the dentists." **– Kamil Szwed from FixUrDental Equipment Services**

Testimonials

"I found the Stern Weber S200 chairs straight-forward to use and the set-up process explained itself. The way the whole chair is positioned and structured, keeps every instrument and handpiece within easy reach. The operator can easily work in all positions without having to reach over the patient. A lot of the features are touchless, such as the footstool, which helps with infection control and manoeuvrability for both dentist and assistant." **– Victoria and Jake Viti, Aesthetik Dental, Australia**

The S380 fits the bill as a 'full-package treatment centre'. "It's got an in-built endodontic system, so I don't have to purchase an extra motor for root canals. Neither do I need to buy a separate motor for implants as it's also designed for implants and surgical procedures." **– Dr Vergara, New Leaf Dental, Erina, NSW**
